Likewise, each sensitivity run can be analyzed in detail, allowing you to view all slip surface information for all sensitivity runs.. Watch a movie showing the new docking window support in GeoStudio: Introduction to Docked Windows (3:35) Docking windows include an Analysis Explorer, Solve Manager, Result Times, Slip Surfaces, and Sensitivity Runs. In the case of the 2018 version, some antiviruses may mistakenly identify crack files as viruses if the files are clean, so the software installation directory should be included in the list of antivirus exceptions. Improved Viewing of Results Results are now automatically displayed when you start solving a GeoStudio problem. Perform stress analysis of the deformation of earth structures using SIGMA / WDynamic analysis of earthquakes to earthquakes or pointing to mechanical forces from an explosion or a sudden impact using the QUAKE / W toolAnalysis of thermal changes in land due to environmental factors or construction facilities such as buildings or pipelines using TEMP / WModeling the movement of pollutants through porous materials such as soil and rockAnalysis of groundwater and air interaction problems in soil and rockAnalysis of flow from the environment, across the surface of the earth, from the unsaturated fan zone to the local groundwaterTo see the full data GeoStudio to here.

You can monitor the convergence history directly in Results view after each time step has completed by plotting the number of unconverged nodes for each iteration or time step. SLOPE/W Reinforcement properties have been changed to match industry-standard nomenclature.. You can also use it for the analysis of confined and unconfined steady-state seepage problems, of linear-elastic settlement and stress distribution problems, for tracking contaminants within the ground water flow, for the analysis of freeze-thaw problems and for 1D vadose zone and soil cover.
